

NEXA

MT5 Quick Start Guide

Install MetaTrader 5, add a NEXA Expert Advisor and load the correct preset.

Software support material only. This guide does not provide financial advice or guarantee trading results.

1. Install MetaTrader 5

Download MetaTrader 5 from the official MetaQuotes page or directly from your broker. Official platform page: <https://www.metatrader5.com/en/download>

1. Install MT5 and open the trading account supplied by your broker.
2. Confirm the account, server name and symbol used for gold. Brokers may display XAUUSD as GOLD, GOLD.i, XAUUSDm or another suffix.
3. Keep MT5 updated. Restart the terminal after a platform update if an Expert Advisor does not load correctly.

Use desktop MT5 for automated trading

Expert Advisors run in the desktop terminal. Mobile MT5 is useful for monitoring, but it does not run an EA continuously.

2. Install a NEXA Expert Advisor

1. Open MT5 and select File > Open Data Folder.
2. Open MQL5 > Experts and copy the supplied .ex5 file into that folder.
3. Return to MT5. In the Navigator panel, right-click Expert Advisors and select Refresh, or restart MT5.
4. Open the required chart and timeframe, then drag the NEXA EA onto the chart.
5. Allow Algo Trading only after reviewing the product guide and the selected preset.

Protected customer build

Use only the version supplied through your approved NEXA order. Do not rename, modify or redistribute the licensed file.

3. Load a .set preset

1. Open the EA settings window and select the Inputs tab.
2. Choose Load, select the supplied .set file and review the values.
3. Confirm the symbol, lot settings, trading hours and licence fields before selecting OK.
4. Save a screenshot of the settings used for your own records.

4. Enable operation safely

1. Confirm the Algo Trading button is enabled in MT5.
2. Check the Experts and Journal tabs for licence, symbol or permission messages.
3. Keep the chart open and the computer or VPS connected while the EA is expected to operate.
4. Test on a demo account before using any live account.

WebRequest and licence access

If the product uses online licensing, add only the exact HTTPS licence URL supplied with the customer package under Tools > Options > Expert Advisors. Never add an unknown address.

Security

NEXA support does not need your wallet seed phrase, wallet private key, broker password or remote desktop password. Remove account numbers from screenshots unless they are required for licence support.
